Re: K K DOB

To Whom It May Concern,

Kenan's mother has informed me and supplied test results showing that K and his brother were exposed to black mold around the bathroom and bedroom they were living in at and around the time that they developed muscle weakness and lethargy. This issue could explain the problem they were suffering from and further evaluation with a physician specializing in mold for an opinion would be helpful. There are mold detoxification enzyme issues that individuals can have that explain susceptibility to mold related-illness. It is imperative they be evaluated and this be explored further. If the issues they are having resolve outside the home, it would provide reasonable suspicion as well for a plausible explanation for their illness.
